

Patient Wristbanding Made Easy

The Zebra HC100 cartridge based wristband printing system can save money and increase efficiencies by providing wristbands that will last up to 14 days and improve your scanning rates. Contact Dasco to find out more about improving your patient identification with the Zebra HC100 printer.

Upgrade Technology

Replace outdated, oversized and wasteful printers with the modern and efficient Zebra HC100 thermal printer. High quality bar codes create easily scannable wristbands and the new and enhanced ZBI operating system allows interfacing to virtually all existing software applications.

Save Space

A small and efficient package with wristbands that last up to 14 days. The HC100 printer automatically detects and calibrates for adult or pediatric sizes in recyclable cartridges and there are no wasted wristbands or labels.

Improve Wristband Performance

The new anti-microbial coated wristbands are available with either adhesive or clip enclosure systems and the direct thermal printable synthetic wristbands are virtually indestructible, providing crisp, indelible text and 2D barcodes if desired.
